## Abstracts

Halloysite is an aluminosilicate clay mineral with the empirical formula  $Al_2Si_2O_5(OH)_4$ . Its main constituents are aluminium (20.90%), silicon (21.76%) and hydrogen (1.56%). It is a member of the kaolinite family of luminumosilicates but, whereas kaolin particles are platy in shape, halloysite particles are nanotubes, where the aluminosilicate sheets are rolled up like a scroll.

Regionally, halloysite production sites are mainly distributed in four regions, such as North America, Europe, Oceania and China. In 2017, Oceania is the largest production region, with revenue of 14.18 million USD. Europe is the second largest sales region. Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency.
