Abstracts

High Power Thermoelectric Modules are designated as having a Q_{cmax} greater than 100 watts. High Power Thermoelectric Modules are used when large amounts of heat pumping are required.

High Power Thermoelectric Modules are designed to maximize heat pumping capacity. The high density loading factor in these TEMs enables very high cooling capacities and efficiencies to be achieved in standard footprint sizes. The high cooling density enables high performing heat exchangers to be produced in smaller, more efficient sizes.

According to QYResearch's new survey, global High Power Thermoelectric Modules (TEM) market is projected to reach US\$ million in 2029, increasing from US\$ million in 2022, with the CAGR of % during the period of 2023 to 2029. Influencing issues, such as economy environments, COVID-19 and Russia-Ukraine War, have led to great market fluctuations in the past few years and are considered comprehensively in the whole High Power Thermoelectric Modules (TEM) market research.

Global Thermoelectric Cooler (TEC) Modules market is projected to reach US\$ 1766.3 million in 2029, increasing from US\$ 838.7 million in 2022, with the CAGR of 11.1% during the period of 2023 to 2029.

Demand from Consumer Electronics and Communication are the major drivers for the industry.

China is the largest market, with a share about 28%, followed by North America and Japan with the share about 23% and 20%.
