## Abstracts

Pump is a device that moves fluids (liquids or gases), or sometimes slurries, by mechanical action. High Pressure pump is a pump capable of producing output high pressures.

The major regions to produce High-Pressure Pump are North America, Europe, Asia-Pacific (W/O China) and China, which accounting for more than 90 % of production in total. Europe is the largest production region (production share 41.49% in 2015), followed by North America.

According to our research and analysis, manufacturers from North America and Europe are the major leaders in the international market of high-pressure pump. Manufacturers from China are immature in technology. There is large space in the China market, as well as big gap between international brands and local brands on price.

High-Pressure Pump product demand market there is also a certain space, but basically showing the scarcity of high-end products, low-end products, excess capacity, there is a large market demand for high-end products to seize market share of imports acts, local enterprises export more low-end products overcapacity.

Despite the presence of competition problems, due to the global recovery trend is clear, investors are still optimistic about this area; the future will still have more new investment enter the field.

Although sales of High-Pressure Pump brought a lot of opportunities, the study group recommends the new entrants just having money but without technical advantage and downstream support do not to enter into the High-Pressure Pump field.
