A hip protector is a specialized form of pants or underwear containing pads (either hard or soft) along the outside of each hip/leg, designed to prevent hip fractures following a fall. They are most commonly used in elderly individuals who have a high risk of falls and hip fractures.

First, for industry structure analysis, the Hip Protectors industry is not very concentrated. These manufacturers ranging from large multinational corporations to small privately owned companies compete in this industry. The top five producers account for about 53.65% of the revenue market. Regionally, USA is the biggest production value area of valves, also the leader in the whole Hip Protectors industry. Second, the production of Hip Protectors increased from 503.17 K Items in 2011 to 630.49 K Items in 2015 with an average growth rate of more than 5.5%.
