This report studies the global Hot Runner Controller market status and forecast, categorizes the global Hot Runner Controller market size (value & volume) by key players, type, application, and region.

A controller is electronic technology used to control the hot runner temperature but also for motion control pressure, sequence control, mold cooling and other value-added intelligence activities. A hot runner controller can be sold with a hot runner system or as a standalone product and can control a Mold-Masters hot runner system or a competitor’s hot runner system.
Hot runner controller is a technology-intensive and high entry barrier industry. At present, in developed countries, the hot runner controller industry is generally at a more advanced level. The world's large enterprises are mainly concentrated in North America, Europe and Korea. Meanwhile, foreign companies have more advanced equipment, strong R & D capability, and leading technical level. However, foreign companies’ manufacturing cost is relatively higher, compared with Chinese companies.
Asia is poised to be the fastest-growing region during the forecast period. The high growth in this market is attributed to the growing geriatric population, growing adoption of hot runner systems. Hot runner systems are displacing legacy cold runner technology driven by an increased need for productivity, efficiency, automation and higher part quality. Although growing, hot runner penetration levels in emerging markets remain well below the penetration levels seen in developed economies.

The global Hot Runner Controller market is valued at 480 million US$ in 2017 and will reach 800 million US$ by the end of 2025, growing at a CAGR of 6.5% during
