## Abstracts

Hydraulic press is a device using a hydraulic cylinder to generate a compressive force. It uses the hydraulic equivalent of a mechanical lever. These presses are ideal for assembly, straightening, fabrication, quality control, maintenance, product testing, bending, punching and shearing. Press frames are constructed of heavy-duty arc steel and can be easily modified to accommodate a wide range of pressing needs.

For industry structure analysis, the hydraulic press industry is fragmented. A variety of manufacturers ranging from large multinational corporations to small privately owned companies compete in this industry. The top ten producers account for about 27.35% of the revenue market.

Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency. The global impacts of the coronavirus disease 2019 (COVID-19) are already starting to be felt, and will significantly affect the Hydraulic Press 4900 market in 2020.

COVID-19 can affect the global economy in three main ways: by directly affecting production and demand, by creating supply chain and market disruption, and by its financial impact on firms and financial markets.
