### **Abstracts**

Hydraulic work support is a kind of sophisticated device used to offer support to the works. Hydraulic work supports can protect the works from distortion and avoid the vibration while machining. With these advantages, hydraulic work supports can help the sophisticated equipment producing works with higher precision.

Most manufacturers of hydraulic work supports are located in these development regions like USA, Europe and Japan. In these regions, machining industry is relatively developed, which provide the market demand for hydraulic work supports. The highly development technology has also provide the technical basis of hydraulic work supports.

China is the emerging market of machining industry, especially the precision machining industry, which is the development trend in the future. But now, there is only some little companies producing these products. Most consumers prefer to buy products from foreign manufacturers, who can provide product with much better performance. In the market, only several international giants can establish many branches to deal with their business around the world. Most manufacturers prefer to take distribution as their marketing channels, which can reduce their marketing cost and expand their sales market.

With the development of precision manufacturing industry, the demand for hydraulic work supports will be larger and larger. As a considerable emerging market, there will be more manufacturers appeared in China, including domestic manufacturers and branches of international manufacturers.

Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency.
