Abstracts

Hydrogen terminated silicone oil is one kind of polysiloxane, which contains Si-H bonds on its end groups. This Si-H bonds is led by the hydrogenation reaction . It is the basic raw material to produce silicone-modified block or graft copolymer. And is also one kind of the key silicone intermediates.

According to QYResearch's new survey, global Hydrogen Terminated Silicone Oil market is projected to reach US\$ 115.6 million in 2029, increasing from US\$ 84 million in 2022, with the CAGR of 6.2% during the period of 2023 to 2029. Influencing issues, such as economy environments, COVID-19 and Russia-Ukraine War, have led to great market fluctuations in the past few years and are considered comprehensively in the whole Hydrogen Terminated Silicone Oil market research.

Silicones are one of the most versatile products used in a wide range of industries. Silicone is best suited for use in temperatures higher than 100 °C (the limit of most other rubbers). Silicone rubber is non-toxic and used in food applications. The superior properties of silicones make them suitable for use in seals and gaskets that need to be steamed or sterilized. They are also used in the electrical & electronics industry due to their excellent electrical resistance. Silicone is also used as insulation materials in various electronic components such as computers, televisions, and aircraft video displays protecting them from dust, dirt, and heat. The global silicone market was valued at USD 18.5 billion in 2022 and is projected to reach USD 27.0 billion by 2029, growing at a CAGR 7.8% from 2023 to 2029. The market growth is driven by increasing use in the building & construction and transportation industries as well as by their increasing demand in the industrial process. The building & construction industry is the second- largest silicone end-use industry. Silicone materials are used in different forms in construction industry, with products ranging from paste-like materials to flowable

adhesives. Rapid industrialization has led to increased industrial activities, thereby increasing the demand for silicones in RTV adhesives and as antifoaming agents in several industrial processes.
