Abstracts

This report studies the global Hyperspectral Remote Sensing market status and forecast, categorizes the global Hyperspectral Remote Sensing market size (value & volume) by manufacturers, type, application, and region. This report focuses on the top manufacturers in North America, Europe, Japan, China, India, Southeast Asia and other regions (Central & South America, and Middle East & Africa).

Hyperspectral remote sensing, also known as imaging spectroscopy, is a relatively new technology that is currently being investigated by researchers and scientists with regard to the detection and identification of minerals, terrestrial vegetation, and man-made materials and backgrounds.

This report covers hyperspectral imaging cameras (Hyperspectral Cameras, Accessories). The hyperspectral cameras can be operated using software, which controls the cameras and scanning stage and has many tools to analyze hyperspectral data.

With the increasing in production capacity, expected that the hyperspectral remote sensing raw material price will be stable in the short term. However, the improvement of energy, transportation costs, and labor costs, will play a significant role in promoting the cost of hyperspectral remote sensing.

There are companies adding new capacities and aims at the cost and quality leadership which shall improve profitability. As the same time, companies are focusing on technological innovation, equipment upgrades, and process improvements, to reduce costs and improve quality.

The global Hyperspectral Remote Sensing market is valued at 160 million US\$ in 2017 and will reach 210 million US\$ by the end of 2025, growing at a CAGR of 3.9% during 2018-2025.
