## Abstracts

Polio vaccines can be classified into two types: the inactivated polio vaccine (IPV) and oral polio vaccine. Oral polio vaccine is more active than IPV as it has both weakened and live poliovirus. Inactivated polio vaccine is a vaccine prepared from suspension of inactivated (killed) poliovirus strains with formalin. It is an injectable vaccine that can either be given alone or with other vaccines. IPV has the ability to provide serum immunity against all the three types of poliovirus and consequent protection against paralytic poliomyelitis. Rabies virus is transferred to humans through the saliva of an animal who is infected by it. Inactivated rabies virus (IRV) is injected before or after the infection of the virus in 1 ml doses having 2.5 IU per ml of rabies virus antigen.

According to QYResearch's new survey, global Inactivated Polio and Rabies Vaccines market is projected to reach US\$ 1051 million in 2029, increasing from US\$ 635 million in 2022, with the CAGR of 7.5% during the period of 2023 to 2029. Influencing issues, such as economy environments, COVID-19 and Russia-Ukraine War, have led to great market fluctuations in the past few years and are considered comprehensively in the whole Inactivated Polio and Rabies Vaccines market research.

The global pharmaceutical market is 1475 billion USD in 2022, growing at a CAGR of 5% during the next six years. The pharmaceutical market includes chemical drugs and biological drugs. For biologics is expected to 381 billion USD in 2022. In comparison, the chemical drug market is estimated to increase from 1005 billion in 2018 to 1094 billion U.S. dollars in 2022. The pharmaceutical market factors such as increasing demand for healthcare, technological advancements, and the rising prevalence of chronic diseases, increase in funding from private & government organizations for development of pharmaceutical manufacturing segments and rise in R&D activities for drugs. However, the industry also faces challenges such as stringent regulations, high

costs of research and development, and patent expirations. Companies need to continuously innovate and adapt to these challenges to stay competitive in the market and ensure their products reach patients in need. Additionally, the COVID-19 pandemic has highlighted the importance of vaccine development and supply chain management, further emphasizing the need for pharmaceutical companies to be agile and responsive to emerging public health needs.
