1 Infrared Camera Market Overview

1.1 Product Overview and Scope of Infrared Camera

A thermographic camera (also called an infrared camera or thermal imaging camera) is a device that forms an image using infrared radiation, similar to a common camera that forms an image using visible light. Instead of the 400-700 nanometre range of the visible light camera, infrared cameras operate in wavelengths as long as 14,000 nm (14 μ m).

Their use is called thermography.
