Abstracts

This report studies the global Infrared Camera market status and forecast, categorizes the global Infrared Camera market size (value & volume) by manufacturers, type, application, and region.

This report focuses on the top manufacturers in North America, Europe, Japan, China, and other regions (India, Southeast Asia, Central & South America, and Middle East & Africa).

A infrared camera (also called an thermographic camera or thermal imaging camera) is a device that forms an image using infrared radiation, similar to a common camera that forms an image using visible light. Instead of the 400–700 nanometre range of the visible light camera, infrared cameras operate in wavelengths as long as 14,000 nm (14 μm). Their use is called thermography.

Recent technological advancements have led to miniaturization, which is expected favorably impact market growth over the forecast period. These cameras are capable of viewing across a long-wave infrared region, and can also detect objects in total darkness. High investment, availability of cost-effective products due to mass production, and a range of diverse applications integrating this technology are expected to be the key market drivers. Further, the IR camera market is also expected to witness growth owing to declining product price.

The global Infrared Camera market is valued at 450 million US\$ in 2017 and will reach 1040 million US\$ by the end of 2025, growing at a CAGR of 11.0% during 2018-2025.
