## Abstracts

Inorganic Scintillators are crystals grown in high temperature furnaces and are made of Alkali Halides (i.e., NaI, CsI) or Oxides (i.e., BGO), etc. They have scintillation properties by virtue of their crystalline structure. This structure creates the energy bands between which electrons can jump up to higher energy levels by excitation through ionizing radiation or down to lower energy levels by de-excitation through the emission of (visible) photons. The result is known as the scintillation effect.

Some crystals need activators to enable scintillation emission in the visible part of the spectrum. An example of such an activator is Thallium (Tl), which is used in the best known and most frequently used Inorganic Scintillator: NaI(Tl).

The market volume of inorganic scintillators is related to downstream demand and global economy. Although there will always be some uncertainties in the global economy in the following years, people's requirement of health and safety is increased, it is surely forecasted that the market of inorganic scintillators is still promising.

Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency. The global impacts of the coronavirus disease 2019 (COVID-19) are already starting to be felt, and will significantly affect the Inorganic Scintillators 3900 market in 2020.

COVID-19 can affect the global economy in three main ways: by directly affecting production and demand, by creating supply chain and market disruption, and by its financial impact on firms and financial markets.

The outbreak of COVID-19 has brought effects on many aspects, like flight cancellations; travel bans and quarantines; restaurants closed; all indoor events restricted; over forty countries state of emergency declared; massive slowing of the supply chain; stock market volatility; falling business confidence, growing panic among the population, and uncertainty about future.

This report also analyses the impact of Coronavirus COVID-19 on the Inorganic Scintillators 3900 industry.

Based on our recent survey, we have several different scenarios about the Inorganic Scintillators 3900 YoY growth rate for 2020.
