Abstracts

Insulators are used in electrical equipment to support and separate electrical conductors without allowing current through themselves. An insulating material used in bulk to wrap electrical cables or other equipment is called insulation. The term insulator is also used more specifically to refer to insulating supports used to attach electric power distribution or transmission lines to utility poles and transmission towers. They support the weight of the suspended wires without allowing the current to flow through the tower to ground.

The Insulators industry concentration is scattered; there are over 50 mainly manufacturers in the world, and the products mainly from China and Europe. And the mainly player in United States including PPC Insulators, GE, TE Connectivity, Meister International, NGK-Locke, MacLean Power Systems, Hubbell Incorporated, Lapp Insulators, INAEL Electrical, ABB, MR, SIEMENS, Victor Insulators.
