Abstracts

The ion selective electrode analyzer is to identify specific ions in the presence of ion concentration in the analysis solution to determine the ion activity in the solution. Technically, the potentiometric methods of analysis involve the direct measurement of electrical potential owing to the movement of free-ions. Therefore, ion selective electrodes are built to be subtle toward independent ions.

Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency. The global impacts of the coronavirus disease 2019 (COVID-19) are already starting to be felt, and will significantly affect the Ion Selective Electrode Analyzer market in 2020.

COVID-19 can affect the global economy in three main ways: by directly affecting production and demand, by creating supply chain and market disruption, and by its financial impact on firms and financial markets.

The outbreak of COVID-19 has brought effects on many aspects, like flight cancellations; travel bans and quarantines; restaurants closed; all indoor events restricted; over forty countries state of emergency declared; massive slowing of the supply chain; stock market volatility; falling business confidence, growing panic among the population, and uncertainty about future.

This report also analyses the impact of Coronavirus COVID-19 on the Ion Selective Electrode Analyzer industry.
