Abstracts

This report studies the global Isopentane and Normalpentane Blend market status and forecast, categorizes the global Isopentane and Normalpentane Blend market size (value & volume) by manufacturers, type, application, and region. This report focuses on the top manufacturers in North America, Europe, Japan, China, India, Southeast Asia and other regions (Central & South America, and Middle East & Africa).

Isopentane and Normalpentane Blend contain Isopentane and Normalpentane as the main ingredients. The single principal content is not less than 10%, not more than 90%. Pentane blend is a very fast evaporating hydrocarbon solvent and low in impurities such as sulphur, olefins, benzene and total aromatics. Examples of end uses for this solvent are blowing agent, electronic cleaning and polymerisation.

Mixed pentane is a low-cost blowing agent. Over the past few decades, the technology and development of mixed pentane have not developed by leaps and bounds. In the Asia-Pacific region, EPS is growing faster. The EPS industry in the US and Europe is already quite stable.

As China's EPS market continues to grow, China has become the world's largest producer and consumer country. Europe is the second largest consumer area. The downstream customers of Japan, Southeast Asia and India are less. As a result, the markets in these areas are small. In the future, India and Southeast Asia market is expected to show some growth. In the world, the main consumers are BASF, SABIC, INOES and Huntsman.

The global Isopentane and Normalpentane Blend market is valued at 100 million US\$ in 2017 and will reach 160 million US\$ by the end of 2025, growing at a CAGR of 6.3% during 2018-2025.
