## Abstracts

Isoprene rubber (IR) is a polymer of synthetic isoprene. It combines the key qualities of natural rubber such as good mechanical properties and hysteresis with superior features such as high purity, excellent clarity, good flow, low gel content, no nitrosamines, and no natural rubber proteins. The IR products are widely used in tire, medical products, conveyor belts and others.

In addition, polyisoprene elastomer is equivalent to isoprene rubber (IR).

In consumption regions, the growth rate of global consumption is smooth relatively.

Russia is still the mainly consumption regions due to the advanced production technology and rapid development of economy.

The isoprene rubber industry is easily affected by the price of the natural rubber crude oil and natural gas. The natural rubber is an alternative of IR products, with the same price trends in the past few years. The price of natural rubber changed intensely since 2013, which lead to the fluctuation of IR price.

The major raw material for isoprene rubber is isoprene monomer. On the global market, supply of raw materials is full. Fluctuations in the price of the upstream product will impact on the production cost of isoprene rubber industry.

We tend to believe this industry is a rising industry, and the consumption increasing degree will show a smooth growth curve. And the price presents fluctuation according to the economy development status and international competition. Also, there is fluctuation in gross margin.

Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency. The global impacts of the coronavirus disease 2019 (COVID-19) are already starting to be felt, and will significantly affect the Isoprene Rubber (IR) 3900 market in 2020.

COVID-19 can affect the global economy in three main ways: by directly affecting

production and demand, by creating supply chain and market disruption, and by its financial impact on firms and financial markets.

The outbreak of COVID-19 has brought effects on many aspects, like flight cancellations; travel bans and quarantines; restaurants closed; all indoor events restricted; over forty countries state of emergency declared; massive slowing of the supply chain; stock market volatility; falling business confidence, growing panic among the population, and uncertainty about future.

This report also analyses the impact of Coronavirus COVID-19 on the Isoprene Rubber (IR) 3900 industry.

Based on our recent survey, we have several different scenarios about the Isoprene Rubber (IR) 3900 YoY growth rate for 2020.
