## Abstracts

This report studies the global Isoquinoline market status and forecast, categorizes the global Isoquinoline market size (value & volume) by manufacturers, type, application, and region. This report focuses on the top manufacturers in North America, Europe, Japan, China, India, Southeast Asia and other regions (Central & South America, and Middle East & Africa).

Isoquinoline, a structural isomer of quinolone, is a heterocyclic aromatic organic compound. Both isoquinoline and quinoline are benzopyridines, which are composed of a benzene ring fused to a pyridine ring.

Isoquinoline is widely used to produce praziquantel which can cure diseases caused by blood flukes. With increasing populations who suffer from diseases caused by blood flukes, isoquinoline still has a certain market space. China has become the largest producer of isoquinoline at the moment.

As some praziquantel manufacturers adopt new technology to produce their products and give up isoquinoline as raw material, the isoquinoline market is shrinking with some manufacturers are exiting the industry.

Global production of isoquinoline will decrease to 580 MT in 2015 from 1265 MT in 2010. It is estimated that impacted by alternatives, global demand of isoquinoline will keep decreasing with an average growth rate of -12.34% in the coming five years. In addition, similar with that of globe, the production of isoquinoline in China will decrease from 923 MT in 2010 to 580 MT in 2015, accompanied with an average growth of -12.42% in the coming five years.

We tend to believe that this industry has dim future, considering the current demand. As for product prices, the slow downward trend in recent years will continue in the next few years, due to weak demand. Similarly, there will be fluctuations in gross margin.

The global Isoquinoline market is valued at 6 million US\$ in 2017 and will reach 2

million US\$ by the end of 2025, growing at a CAGR of -12.3% during 2018-2025.
