Abstracts

IT Cooling System is a whole set of equipment which can be used in the data center to exchange heat through four important units: Compressor, Condenser, Evaporator and Throttle. According to the type of cooling medium, it can be divided into water cooling unit and air cooling unit.

Regionally, USA is the biggest Consumption area of IT Cooling Systems in the world and China is the most potential market with the fastest growing rate of 5.4%.

As a new kind of Cooling Systems, the Consumption process will become mature gradually with more and more companies enter this field.

For next few years, the global IT Cooling Systems revenue would keep increasing with annual growth rate with 10.5%. With the average Consumption capacity utilization 80% and global Consumption capacity IT Cooling Systems will reach 374000Units in 2021.

With the development of technology and rise of Consumption cost, the price of IT Cooling Systems will keep rising, and the cross margin margin will decline.

Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency.
