Abstracts

This report studies the global Kirschner Wires market status and forecast, categorizes the global Kirschner Wires market size (value & volume) by manufacturers, type, application, and region. This report focuses on the top manufacturers in North America, Europe, Japan, China, India, Southeast Asia and other regions (Central & South America, and Middle East & Africa).

A kirschner wires (also called a K-wire) is a thin wire or pin that can be used to stabilize bone fragments. These wires can be drilled through the bone to hold the fragments in place. They can be placed percutaneously (through the skin), or can be buried beneath the skin.

Kirschner wires come in different sizes, and as they increase in size, they become less flexible. K-wires are often used to stabilize a broken bone, and then removed in the office once the fracture has healed.

The wires can also be threaded to help prevent movement or backing out of the wire, although that can also make them more difficult to remove.

The global Kirschner Wires market is valued at 28 million US\$ in 2017 and will reach 33 million US\$ by the end of 2025, growing at a CAGR of 2.5% during 2018-2025.
