L-Valine is one of 8 kinds of essential amino acid. It works with other two kinds of high concentration amino acid (isoleucine and leucine) to improve body normal growth, repair tissue, regulate blood glucose and provide with required energy.

L-Valine is an essential amino acid and, along with L-leucine and L-isoleucine, is part of the branched chain of amino acids. The body cannot manufacture L-valine, so it must be acquired via diet or supplementation. L-valine is mainly used in the production of pharmaceutical products and protected intermediates such L-valine methyl ester hydrochloride, Cbz-L-valine, Boc-L-valine. Therefore, pharmaceutical industry is its largest downstream market, which shares 74.88% of the consumption in 2015.

The L-valine industry is highly competitive due to low entry barriers as the industry is less capital intensive and there is no major technology involved.

The global L-Valine market is valued at 140 million US\$ in 2017 and will reach 160 million US\$ by the end of 2025, growing at a CAGR of 1.9% during 2018-2025.
