A laboratory information system (LIS) is information tool that processes, stores and manages data from all stages of medical processes and tests. The stored information saved in LIS database for future reference. Basic laboratory information systems commonly have features that manage patient check in, order entry, specimen processing, result entry and patient demographics.

The major consumption regions of laboratory information System (LIS) are America, Europe, Asia-Pacific, which accounting for about 96 % of sales value in total.

Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency.
