Abstracts

This report studies the global LABSA market status and forecast, categorizes the global LABSA market size (value & volume) by manufacturers, type, application, and region. This report focuses on the top manufacturers in North America, Europe, Japan, China, India, Southeast Asia and other regions (Central & South America, and Middle East & Africa).

Linear Alkyl Benzene Sulphonic Acid (LABSA) is an anionic surfactants with molecules characterized by a hydrophobic and a hydrophilic group. They are nonvolatile compounds produced by sulfonation. Linear alkyl benzene sulfonic acid are complex mixtures of homologues of different alkyl chain lengths (C10 to C13 or C14) and phenyl positional isomers of 2 to 5-phenyl in proportions dictated by the starting materials and reaction conditions, each containing an aromatic ring sulfonated at the para position and attached to a linear alkyl chain at any position with the exception of terminal one (1-phenyl).

The properties of linear alkyl benzene sulfonic differ in physical and chemical properties according to the alkyl chain length, resulting in formulations for various applications. LABSA has mainly two types, which include LABSA 96% and LABSA 90%. With washing function of LABSA, the downstream application industries will need more LABSA products. So, LABSA has a huge market potential in the future. Manufacturers engaged in the industry are trying to produce high purity and good performance LABSA through improving technology.

The global LABSA market is valued at 3600 million US\$ in 2017 and will reach 4390 million US\$ by the end of 2025, growing at a CAGR of 2.9% during 2018-2025.
