Abstracts

Laparoscopy is a type of surgical procedure in which a small incision is made, usually in the navel, through which a viewing tube (laparoscope) is inserted.

Laparoscopy devices are a series of Camera-monitoring system, CO2 insufflators system, and mechanical operation system under typically minimally invasive surgery (MIS) performed in the hospital with general anesthesia.

The growth in the market will benefit from continuous advancements in technology and a parallel reduction in the prices of high-end laparoscopic instruments. The resulting decline in the cost of laparoscopy is helping make these procedures affordable to a large base of patients thus benefiting demand for laparoscopic devices.

Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency. The global impacts of the coronavirus disease 2019 (COVID-19) are already starting to be felt, and will significantly affect the Laparoscopic Devices 4900 market in 2020.

COVID-19 can affect the global economy in three main ways: by directly affecting production and demand, by creating supply chain and market disruption, and by its financial impact on firms and financial markets.
