Abstracts

Laser cutting machine is a machine which uses laser beam to cut materials such as acrylic, plastic, wood, fabric, and many other non-metallic materials. The laser cutting machines initially casts laser beam on the surface of work piece, melts it and finally evaporates the particular area of work piece using the energy released by laser.

Europe was the largest production market with a market share of 29.42% in 2012 and 26.78% in 2017 with a decrease of 2.64%. North America ranked the second market with the market share of 24.76% in 2016.

Laser Cutting Machines product demand market there is also a certain space, but basically showing the scarcity of high-end products, and low-end products, excess capacity. Along with the development of Chinese domestic Laser Cutting Machines, Chinese domestic Laser Cutting Machines has been very mature and advanced, and the performance distance has been shortening compared with the imported Laser Cutting Machines.

Despite the presence of competition problems, due to the global recovery trend is clear, investors are still optimistic about this area; the future will still have more new investment enter the field.

Although sales of Laser Cutting Machines brought a lot of opportunities, the study group recommends the new entrants just having money but without technical advantage and downstream support do not to enter into the Laser Cutting Machines field. As large demand of high-end products at home and abroad, many companies began to enter the field of high-end. Currently, the Chinese Laser Cutting Machines industry is not only begin to transit to high-end Laser Cutting Machines products, while still extend in the resource-rich land and downstream industry chain.
