Abstracts

Lassa fever is an animal-borne, or zoonotic, acute viral illness. It is endemic in parts of West Africa including Sierra Leone, Liberia, Guinea and Nigeria. Neighboring countries are also at risk, as the animal vector for Lassa virus, the “multimammate rat” (*Mastomys natalensis*) is distributed throughout the region. Ribavirin given intravenously and early in the course of illness is an effective treatment, in addition to support of fluid and electrolytes, oxygenation, and blood pressure.
