Abstracts

LCD Monitor Arm is a device used to attach to a computer screen or TV. It is easily adjustable which means it requires minimum effort but can achieve maximum precision. From the structure of LCD Monitor Arms, it can be classified into three kinds, they Single Arm, Double Arm and Muti-Arm. From the material, it can be divided as Carbon steel LCD Arms and Aluminum LCD Arms.

Regionally, China is the biggest Consumption area of LCD Monitor Arm in the world and china is the most potential market with the fastest growing rate of 4.87%.

From the view of application market, 43.09% is the most active and potential field because of the widely use of Consumer Electronics. Although there is big difference between big companies such as Ergotron with new companies, especially in the price of products, customers still willing to pay more money to achieve products or service with higher quality. Therefore, it will become harder and harder for a new company which doesn't have its own core technology and R&D team to survive in this Technology-intensive battle.

For price trend analysis, a key variable in the performance of LCD Monitor Arm producers is raw material aluminium alloy and Steel, specifically the speed at which any increase can be passed through to customers.

For next few years, the global LCD Monitor Arm revenue would keep increasing with annual growth rate with 1.65%. Global Consumption LCD Monitor Arm is 15752.15 K Unit. With the development of technology and decline of Consumption cost, the price of LCD Monitor Arm will keep declining, and the profit margin will decline too.
