Abstracts

Linear low-density polyethylene (LLDPE) is a substantially linear polymer (polyethylene), with significant numbers of short branches, commonly made by copolymerization of ethylene with longer-chain olefins. Linear low-density polyethylene differs structurally from conventional low-density polyethylene (LDPE) because of the absence of long chain branching. The linearity of LLDPE results from the different manufacturing processes of LLDPE and LDPE. In general, LLDPE is produced at lower temperatures and pressures by copolymerization of ethylene and such higher alpha-olefins as butene, hexene, or octene. The copolymerization process produces a LLDPE polymer that has a narrower molecular weight distribution than conventional LDPE and in combination with the linear structure, significantly different rheological properties. In general, LLDPE is produced at lower temperatures and pressures by copolymerization of ethylene and such higher alpha-olefins as butene, hexene, or octene. LLDPE is a base resin. In 2014, Global LLDPE capacity is 32007 K MT. The main production areas are in Asia, Europe and North America while the main consumption areas also in those areas. Asia is the largest consumption and production areas. The Middle East is the largest LLDPE exporter. China is the largest importer of LLDPE

The price of LLDPE is lower year by year from 2011 to 2013. The price is at about 1380-1480 USD/MT in 2015. The product profit margin is about 12.8 %-13.5 %, and it also descends in recent years.

DOW is the largest LLDPE manufacturer in the world, followed by ExxonMobil and SABIC. Sinopec is the biggest LLDPE company in China. In 2015, DOW LLDPE capacity is 5745 K MT and Sinopec LLDPE capacity is 2420 K MT.

We tend to believe that this industry still has a bright future, considering the current demand of downstream. M-LLDPE will be the mainstream LLDPE products. In the subsequent few years, m-LLDPE's market share will grow. In developing countries,

C4-LLDPE is still going to be a mainstream product. In developed countries, many companies are turning to the production of C6-LLDPE and C8-LLDPE. Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency. The global impacts of the coronavirus disease 2019 (COVID-19) are already starting to be felt, and will significantly affect the Linear Low-density Polyethylene (LLDPE) 3900 market in 2020.

COVID-19 can affect the global economy in three main ways: by directly affecting production and demand, by creating supply chain and market disruption, and by its financial impact on firms and financial markets.
