Abstracts

The liquid oxygen pump is a cryogenic liquid pump to increase the pressure of liquid oxygen to achieve the purpose of transporting liquid oxygen. It is commonly used as the liquid oxygen circulating pump in the main condensing evaporator, the process liquid oxygen pump between the upper and lower towers arranged side by side, the product liquid oxygen pump in the internal compression process and the liquid oxygen pump for the storage tank. It can be divided into two categories: centrifugal liquid oxygen pump and plunger liquid oxygen pump. The plunger type is generally used for pressure delivery of liquids with small flow and high pressure.

According to QYResearch's new survey, global Liquid Oxygen Pumps market is projected to reach US\$ 1527.7 million in 2029, increasing from US\$ 1209 million in 2022, with the CAGR of 3.4% during the period of 2023 to 2029. Influencing issues, such as economy environments, COVID-19 and Russia-Ukraine War, have led to great market fluctuations in the past few years and are considered comprehensively in the whole Liquid Oxygen Pumps market research.

The overall volume of the civil pump market is relatively large, and the annual output value of a single small civil pump industry is nearly 70 billion, but the competition is fierce and the structure is relatively scattered. Due to the constant changes in the external environment, small and medium-sized enterprises in the civil pump market are facing accelerated clearance, and the market share is showing a trend of concentration towards the leading players.
