Abstracts

Liquid sealant, also known as liquid gasket, liquid gasket, liquid sealing filler, etc. It is a new polymer static sealing material in a liquid state. The difference between a liquid sealant and a liquid seal putty is that it must give a certain tightening force to the liquid sealant in order to exert its sealing effect, so some people call it a 'liquid gasket'. But it is different from solid gaskets, such as those made of rubber, asbestos, metal, paper and other materials. It has fluidity, so there is no compressive deformation that must occur when a solid gasket is used as a seal, so there is no Stress, relaxation, creep, and elastic fatigue failure are factors that cause leakage. Because of its fluidity, it can fill the depressions and gaps between the bonding surfaces and eliminate interface leakage, so it is an ideal static sealing material.

According to QYResearch's new survey, global Liquid Sealing Agent market is projected to reach US\$ million in 2029, increasing from US\$ million in 2022, with the CAGR of % during the period of 2023 to 2029.

The global liquid sealing agent market is expected to witness steady growth due to expanding construction activities, technological advancements, increasing focus on sustainability, and the need for reliable sealing solutions across various industries. Manufacturers will continue to innovate to meet evolving customer demands and address emerging challenges in different applications.
