## Abstracts

A lysimeter is a measuring device which can be used to measure the amount of actual evapotranspiration which is released by plants (usually crops or trees). By recording the amount of precipitation that an area receives and the amount lost through the soil, the amount of water lost to evapotranspiration can be calculated. Lysimeters are of two types: weighing and non-weighing.

According to QYResearch's new survey, global Lysimeter market is projected to reach US\$ million in 2029, increasing from US\$ million in 2022, with the CAGR of % during the period of 2023 to 2029.

The global lysimeter market is experiencing growth as water management, environmental research, and sustainable agriculture gain importance worldwide. With advancements in technology, increased awareness of water conservation, and the need for evidence-based decision-making, the market is expected to continue expanding in the foreseeable future.
