Abstracts

Magnesite or magnesium carbonate ($MgCO_3$) is utilized in producing magnesium oxide (MgO), which serves as a refractory material in steel and cement industries, and as a raw material for the chemical industry.

According to QYResearch's new survey, global Magnesium Carbonate Minerals market is projected to reach US\$ 83 million in 2029, increasing from US\$ 70 million in 2022, with the CAGR of 2.5% during the period of 2023 to 2029. Influencing issues, such as economy environments, COVID-19 and Russia-Ukraine War, have led to great market fluctuations in the past few years and are considered comprehensively in the whole Magnesium Carbonate Minerals market research.

The Magnesium Carbonate Minerals market is primarily driven by the increasing demand for magnesium compounds in various industries, including pharmaceuticals, construction, and agriculture. Magnesium carbonate is used as an additive in medicines, as a construction material, and as a soil conditioner in agriculture due to its beneficial properties. Furthermore, the rising awareness about the health benefits of magnesium consumption in maintaining bone health, cardiovascular health, and nerve function contributes to the demand for magnesium carbonate minerals. However, challenges exist in terms of sourcing high-quality magnesium carbonate minerals, as well as concerns related to environmental impacts associated with mining and processing these minerals. Striking a balance between meeting growing demand and addressing sustainability concerns remains a key challenge for the market.
