Abstracts

This report studies the global Maleic Anhydride market status and forecast, categorizes the global Maleic Anhydride market size (value & volume) by key players, type, application, and region.

This report focuses on the top players in North America, Europe, China, Japan, Southeast Asia India and Other regions (Middle East & Africa, Central & South America).

Maleic anhydride is a colorless or white solid with an acrid odor. Maleic anhydride is a very versatile molecule that lends itself to many applications requiring a number of properties and functionalities. With three active sites (two carboxyl groups and one double bond), it is an excellent joining and cross linking agent. Its major end use, representing well over half of global demand, is in the manufacture of unsaturated polyester resins, where its cross-linking abilities are important.

Maleic anhydride has many applications and the largest consumer comes from unsaturated polyester resin industry. Besides, there are still two manufacturing technologies adopted by the industry: benzene oxidation and n-butane oxidation. The latter technology is becoming the mainstream technology currently. Huntsman, Lanxess, Polynt, Changzhou Yabang and so on are the major players of maleic anhydride for the time being.

Although China has the largest capacity of maleic anhydride in the world, its capacity utilization rate is much lower, especially for maleic anhydride capacity using benzene oxidation. The oversupply in China is obvious. Affected by the downstream industry and poor profits, benzene oxidation maleic anhydride manufacturers prefer to hold wait-and-see attitudes toward the market for the time being.

The global Maleic Anhydride market is valued at 2240 million US\$ in 2017 and will reach 4390 million US\$ by the end of 2025, growing at a CAGR of 8.8% during 2018-2025.
