Abstracts

MFT applications offer business automation, along with reporting and non-repudiation. An MFT solution should simplify management and ensure regulatory compliance while supporting all current security standards and methodology, including SSLencryption, X.509 encryption and proxy certificates.

MFT has traditionally been deployed behind the firewalls, used for internal and external file transfer. With the growth of the public Cloud, applications and platforms are moving outside the firewalls. If applications, data and platforms are in the Cloud, MFT vendors need to be there too. MFT grew out of the need for better security, control and management of file transfers. FTP is still prevalent, especially in the Cloud, and MFT vendors have a great opportunity to leverage their history and capabilities to make the Cloud and data pipelines to/from the Cloud more secure.
