Abstracts

Manganese bronze contains small additions of manganese, iron, and aluminum, plus lead for lubricity, anti-seizing, and bonding. Like the aluminum bronzes, they combine high strength with excellent corrosion resistance. Manganese bronze bearings can operate at high speeds under heavy loads, but require high shaft hardness and nonabrasive operating conditions.

According to QYResearch's new survey, global Manganese Bronze Rod market is projected to reach US\$ 1603.8 million in 2029, increasing from US\$ 1255.4 million in 2022, with the CAGR of 3.5% during the period of 2023 to 2029. Influencing issues, such as economy environments, COVID-19 and Russia-Ukraine War, have led to great market fluctuations in the past few years and are considered comprehensively in the whole Manganese Bronze Rod market research.

According to the data of the USGS, Chile's copper resource reserves in 2022 reached 190 million tons, accounting for 21.45% of the global copper resource reserves. This is followed by Australia and Peru, with 97 million tons and 81 million tons of copper resources in 2022, respectively. The global share was 10.95% and 9.15%, respectively. In the distribution of global copper resources, China's copper reserves are relatively small, accounting for only 3.05% of global copper reserves, ranking ninth in the world with relatively small reserves.
