## Abstracts

Anti-fouling paint - a category of commercially available underwater hull paints (also known as bottom paints) - is a specialized category of coatings applied as the outer (outboard) layer to the hull of a ship or boat, to slow the growth and/or facilitate detachment of subaquatic organisms that attach to the hull and can affect a vessel's performance and durability (see also biofouling). Anti-fouling paints are often applied as one component of multi-layer coating systems which may have other functions in addition to their antifouling properties, such as acting as a barrier against corrosion on metal hulls that will degrade and weaken the metal, or improving the flow of water past the hull of a fishing vessel or high-performance racing yachts.

According to QYResearch's new survey, global Marine Antifouling Paints market is projected to reach US\$ 355.1 million in 2029, increasing from US\$ 300 million in 2022, with the CAGR of 2.4% during the period of 2023 to 2029. Influencing issues, such as economy environments, COVID-19 and Russia-Ukraine War, have led to great market fluctuations in the past few years and are considered comprehensively in the whole Marine Antifouling Paints market research.

The leading producers in the sector are PPG Industries, Akzo Nobel and Sherwin-Williams, which accounted for 12.87 percent, 9.57 percent and 8.12 percent of revenue, respectively.
