Abstracts

Material Management is a systematic approach for planning, organizing, and controlling the activities that are linked to the flow of material in the organization. Due to continuous up-gradation in information technologies and a need for coordination of such activities related to material and its information, the Material Management Information System (MMIS) has been used for supporting these actions. MMIS is an application software solution which is used to integrate and automate the function likes procurement, transportation, receipts and also fulfill the needs of back-office function and human resources.

According to QYResearch's new survey, global Material Management Information System market is projected to reach US\$ 2601.1 million in 2029, increasing from US\$ 1635 million in 2022, with the CAGR of 6.9% during the period of 2023 to 2029. Influencing issues, such as economy environments, COVID-19 and Russia-Ukraine War, have led to great market fluctuations in the past few years and are considered comprehensively in the whole Material Management Information System market research.

Industrial automation is a collective term for the realization of information processing and process control such as measurement, manipulation, etc. of machines and equipment or production processes without direct human intervention and according to the desired goals. Automation technology is to explore and study the methods and techniques to realize the automation process. It is a comprehensive technology involving machinery, microelectronics, computers, machine vision and other technical fields. With the continuous maturation of industrial automation technology, industrial automation equipment such as production devices, control devices, feedback devices and auxiliary devices are being used in industries such as machine tools, wind power,

textile, packaging, plastics, construction, mining, transportation and healthcare, etc., and the industrial automation market has grown significantly. According to our research, the global industrial automation market reached USD 479 billion in 2022. In the future, as the global Industry 4.0 era continues to advance, the demand for industrial automation equipment in various application areas will further increase.
