Abstracts

Transmission Oil Pump is a part of the lubrication system that pressurizes motor oil for distribution around the transmission. The mechanical pump, built into the front of the transmission, is driven by the torque converter when the engine is running. When the pump turns, it creates a vacuum that pulls fluid from the pan through the filter. Then the pump pressurizes that fluid and sends it to passages inside the transmission.

Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency. The global impacts of the coronavirus disease 2019 (COVID-19) are already starting to be felt, and will significantly affect the Mechanical Transmission Oil Pumps market in 2020.

COVID-19 can affect the global economy in three main ways: by directly affecting production and demand, by creating supply chain and market disruption, and by its financial impact on firms and financial markets.
