Abstracts

An antimicrobial coating is one that is treated with an antimicrobial agent and used to prevent the growth of bacteria, molds, and algae. The device can be affected by bacteria, odors and stains, which can shorten the service life of the product. The antibacterial coating can prevent medical implants from odors, stains and extend the service life of the product. These coatings are nontoxic and biologically stable. The antibacterial coating prevents frequent replacement of implants due to long-term use.

According to QYResearch's new survey, global Medical Antibacterial Coating market is projected to reach US\$ 122.7 million in 2029, increasing from US\$ 96.8 million in 2022, with the CAGR of 3.5% during the period of 2023 to 2029.

The global medical antibacterial coating market is expected to witness substantial growth due to the increasing emphasis on infection control, regulatory requirements, and technological advancements. Manufacturers that offer effective and safe coatings, demonstrate compliance with regulations, provide value-added services, and focus on continuous innovation are likely to thrive in this evolving market.
