This report focuses on the top players in North America, Europe, China, Japan, Southeast Asia India and Other regions (Middle East & Africa, Central & South America).

Medical imaging is the technique and process of creating visual representations of the interior of a body for clinical analysis and medical intervention, as well as visual representation of the function of some organs or tissues (physiology). Medical imaging seeks to reveal internal structures hidden by the skin and bones, as well as to diagnose and treat disease. Medical imaging also establishes a database of normal anatomy and physiology to make it possible to identify abnormalities. Although imaging of removed organs and tissues can be performed for medical reasons, such procedures are usually considered part of pathology instead of medical imaging.

Epidemiological patterns, increasing medical knowledge and increasing prevalence of lifestyle diseases, advantages of medical imaging modalities and advanced imaging equipments are key factors fueling the market growth. Additionally, Technological advancements coupled with supportive investments and funds by government especially in developing countries such as India and China is also expected to contribute towards the market growth. Increasing prevalence of chronic diseases such as diabetes, cardiovascular diseases, and cancer also lead to growth of market. North America is the largest market for medical imaging on account of high disposable income, favorable policies, and better healthcare infrastructure. Asia Pacific is expected to show a lucrative growth rate over the forecast period.

The global Medical Imaging Systems market is valued at 370 million US\$ in 2017 and
