A linear accelerator is a device that uses high Radio-Frequency (RF) electromagnetic waves to accelerate charged particles (i.e. electrons) to high energies in a linear path, inside a tube like structure called the accelerator waveguide. The resonating cavity frequency of the medical linacs is about 3 billion Hertz (cycles/sec). This is the most common device to treat cancer with external beam radiation.

Medical Linear Accelerator demand market has a huge space, there is a large market demand for products. And Developing Countries India will growth in the few years. India has a serious shortage of available health care for most of its citizens, since only a small percentage of the population is covered by any form of health care insurance.
