Abstracts

A pressure sensor is a device that senses pressure and converts it into an electric signal where the amount depends upon the pressure applied. Medical pressure sensors monitor a patient’s condition by providing accurate and reliable diagnostics in a broad range of conditions.
Typically, medical pressure sensors are used to measure gage or differential pressures. Measurement of these pressures can then be used to calculate volumetric flow rates as well as fluid, gas or air volumes.
At present, in the foreign industrial developed countries the medical pressure sensors industry is generally at a more advanced level, the world's large enterprises are mainly concentrated in USA and Europe. Meanwhile, foreign companies have more advanced equipment, strong R & D capability, the technical level is in a leading position. The key consumption markets locate at developed countries. North America and Europe takes the market share of over 60%.But foreign companies’ manufacturing cost is relatively high, compared with Chinese companies, the manufacturing cost has competitive disadvantage, as the Chinese medical pressure sensors production technology continues to improve, their share in the international market is increasing, competitiveness in the international market gradually increase . But the production technology is relatively laggard, it can only produce some low-end product, although the new production lines is increasing, the high-end product is still relying on import.
Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency. The global impacts of the coronavirus disease 2019 (COVID-19) are already starting to be felt, and will significantly affect the Medical Pressure Sensors 4900 market in 2020.
COVID-19 can affect the global economy in three main ways: by directly affecting production and demand, by creating supply chain and market disruption, and by its
