Abstracts

Medical simulation is the modern day methodology for training healthcare professionals through the use of advanced educational technology. Simply put, medical simulation is the experiential learning every healthcare professional will need, but cannot always engage in during real-life patient care. Medical simulation has also been called healthcare simulation, simulation in healthcare, patient simulation, nursing simulation, surgical simulation and clinical simulation.

The medical simulation industry concentration is not high; top ten manufacturers took up about 55% of the global market, and high-end products mainly from America and European. In the world wide, giant manufactures mainly distribute in North America and Europe. North America has a long history and unshakable status in this industry, like Simulaids and Gaumard Scientific, both have perfect products, the CAE Healthcare has become a global leader since it acquired METI in 2011. In Europe, Laerdal Medical leads the technology development and market. The Chinese manufacturers are manly in Shanghai, Beijing and Tianjin.

Medical simulation industry is closely to be mature these years, and the consumption growth rate will show a smooth curve in the next few years. The average product prices has a slow downward trend with the rate of 2.8%-4.3% in recent years, and it will maintain in near future.

North America is the largest market of medical simulation, with the share of about 40% in the past five years, flowed by Europe (About 25%). There are mainly low-end products in chinese market, the production value is only 8% of the world, while the production is about 15%. The chinese product price is nearly 1/2 of the global average price.

Although sales of medical simulation brought a lot of opportunity, the study group recommends the new entrants just having money but without technical advantage and downstream support do not to enter into the semiconductor silicon wafer field.

Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency. The global impacts of the coronavirus disease 2019 (COVID-19) are already starting to be felt, and will significantly affect the Medical Simulation market in 2020.

COVID-19 can affect the global economy in three main ways: by directly affecting production and demand, by creating supply chain and market disruption, and by its financial impact on firms and financial markets.

The outbreak of COVID-19 has brought effects on many aspects, like flight cancellations; travel bans and quarantines; restaurants closed; all indoor events restricted; over forty countries state of emergency declared; massive slowing of the supply chain; stock market volatility; falling business confidence, growing panic among the population, and uncertainty about future.

This report also analyses the impact of Coronavirus COVID-19 on the Medical Simulation industry.
