1 Metal Coatings Market Overview

1.1 Product Overview and Scope of Metal Coatings

Metal Coatings is a covering that is applied to the surface of metal. The purpose of applying the coating may be decorative, functional, or both. The coating itself may be an all-over coating, completely covering the substrate, or it may only cover parts of the substrate. An example of all of these types of coating is a product label on many drinks bottles- one side has an all-over functional coating (the adhesive) and the other side has one or more decorative coatings in an appropriate pattern (the printing) to form the words and images.
