Abstracts

Metal composite panel refers to coat one metal board with another one to save resources and reduce the cost without reducing the effect of corrosion resistance, mechanical strength, etc. Composite methods are usually explosive compound, explosion and rolling composite, rolling composite.
There are several common metal composite panels: aluminum composite panels, copper clad steel plate, zinc composite plate, nickel-titanium composite plate, nickel steel composite panels, nickel-copper composite panels.
Metal composite panel is often used in construction for building curtain walls and interior decorations.
Construction is a major application of metal composite panel, which can be classified as building curtain wall and interior decoration. Metal composite panel can also be used in fields, like anti-corrosion, pressure vessel manufacturing, electrical construction, petrochemical, pharmaceutical, light industry, Furniture and other industries. Building curtain wall is the largest application of metal composite panel, with market share of 60.55% in 2016. Interior decoration takes market share of 27.12%.
Metal composite panel can be classified as Aluminum composite panel, Zinc composite panel and others in terms of material type. Aluminum composite panel is the major kind of metal composite panel due to its quality and reasonable price. The market of Aluminum composite panel is quite separated, with China and North America as the major producing area.
The metal composite panel industry has technical barrier, but the barrier is not significant. The products are ordinary, making it hard for customers to choose from one and another. Consequently, price and product quality are crucial to downstream customers. To metal composite panel manufacturers, the core of brand building is in quality control and technological innovation.
The largest producers of metal composite panel in the worldwide are Mulk Holdings, 3A
