Abstracts

Metallographic Cutting Machine is used for cutting the metallographic specimens with irregular shapes such as cylinder, polygon etc., so as to observe the metallographic and lithofacies structure of the material.

Most metallographic samples need to be cut to the area of interest and for easy handling. Depending upon the material, the cutting operation can be done by abrasive cutting wheels (metals and metal matrix composites), or diamond cutting wheels (ceramics, electronics, biomaterials, minerals).

Global production of metallographic cutting machine was about 5603 units in 2015, and will reach to 5710 units in 2016. From 2011 to 2015, the annual growth rate was about 3.39%.

The major producer located in EU and US, such as Struers, LECO, Buehler, ATM, Allied, METKON, Kemet and PRESI, these companies occupied above 70% market share. And the top three players occupied above 40% market share.

Europe and North America are the largest consumption regions, occupied about 60% market share. Emerging markets are in a stage of rapid development, such as China, India etc. Metallographic cutting machine is mainly used in the laboratory and industrial field.

In the future, the growth rate will be about 3.07%, and the production will reach to 6640 units in 2021. Finally, although sales of metallographic cutting machine products bring a lot of opportunities, the study group recommends the new entrants who just have money but without technical advantage, raw materials advantage and downstream support, do not enter into the metallographic cutting machine field hastily.

Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency. The global impacts of the coronavirus disease 2019 (COVID-19) are already starting to be felt, and will significantly affect the Metallographic

Cutting Machine 4900 market in 2020.

COVID-19 can affect the global economy in three main ways: by directly affecting production and demand, by creating supply chain and market disruption, and by its financial impact on firms and financial markets.

The outbreak of COVID-19 has brought effects on many aspects, like flight cancellations; travel bans and quarantines; restaurants closed; all indoor events restricted; over forty countries state of emergency declared; massive slowing of the supply chain; stock market volatility; falling business confidence, growing panic among the population, and uncertainty about future.

This report also analyses the impact of Coronavirus COVID-19 on the Metallographic Cutting Machine 4900 industry.
