## Abstracts

The Metalorganic Source is a type of metal organic compound suitable for the application of the metal organic compound chemical vapor deposition (MOCVD) technology, and is often referred to as the MO source for short. The purity of MO Source is the key to its high quality.

According to QYResearch's new survey, global Metalorganic Source (MO Source) market is projected to reach US\$ 262.8 million in 2029, increasing from US\$ 146 million in 2022, with the CAGR of 9.2% during the period of 2023 to 2029. Influencing issues, such as economy environments, COVID-19 and Russia-Ukraine War, have led to great market fluctuations in the past few years and are considered comprehensively in the whole Metalorganic Source (MO Source) market research.

Metalorganic Sources (MO Sources) are essential key materials in semiconductor manufacturing processes such as chemical vapor deposition (CVD) and molecular beam epitaxy (MBE). Currently, with the rapid growth of the semiconductor industry, especially the rise of 5G technology, artificial intelligence, and the Internet of Things, the MO Source market is witnessing continuous expansion. The market size is consistently increasing, covering various metal elements such as gallium, arsenic, and germanium, which are widely applied in chip fabrication. In the future, as emerging technologies continue to emerge, the demand for MO Sources in the semiconductor field is expected to further rise, indicating significant market potential. However, along with technological advancements, challenges related to enhancing material purity, stability, and production efficiency will also be encountered.
