Abstracts

Methylamine is an organic compound with a formula of CH_3NH_2 . This colorless gas is a derivative of ammonia, but with one hydrogen atom being replaced by a methyl group. It is the simplest primary amine. It is sold as a solution in methanol, ethanol, tetrahydrofuran, or water, or as the anhydrous gas in pressurized metal containers.

Industrially, methylamine is transported in its anhydrous form in pressurized railcars and tank trailers. It has a strong odor similar to fish. Methylamine is used as a building block for the synthesis of many other commercially available compounds. Generally speaking, there are two forms of methylamine: gas and liquid. In our report, gas will be turned into the form of liquid when calculated. That's to say, we do research based on that 1 MT gas type methylamine is equal to 2 MT liquid type methylamine.

Methylamine is an important chemical intermediate, in commercial production methanol and NH_3 are the key materials. Methylamines exist in two forms: gas and liquid. Liquid type is the main type and takes 83.84% share, the purity is 40%, 50% and 60%. The application of Methylamine is wide and pesticides, n-methylpyrrolidone and alkylalkanolamines are the most important applications. The shares are 32.88%, 35.37% and 24.41%, respectively. Pharmaceuticals are also the application field of methylamine, but the share is relatively low, in 2016 the share is only 3.19%.

Eastman, Chemours and BASF are the main manufacturers in North America, the total consumption volume in North America was 341616 MT in 2016, the products of Eastman and Chemours are well sold, the shares are 55.99% and 27.10%, respectively. In North America, USA is the biggest consuming region, the consumption volume increases to 337485 MT in 2017 from 245801 MT in 2012 with the average growth rate of 6.55%. Canada is the second largest consuming region, with 14280 MT consumed in 2016.

In the future, the market is bright and full of potential. Because the demand is promising, Eastman, Chemours, BASF and other manufacturers pay more attention to the methylamine market in North America. So in our prediction, the production will continue to increase and the consumption volume will also enhance. In 2022 the

consumption volume will be 431470 MT from 341616 MT in 2016.

Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency. The global impacts of the coronavirus disease 2019 (COVID-19) are already starting to be felt, and will significantly affect the Methylamine 3900 market in 2020.

COVID-19 can affect the global economy in three main ways: by directly affecting production and demand, by creating supply chain and market disruption, and by its financial impact on firms and financial markets.

The outbreak of COVID-19 has brought effects on many aspects, like flight cancellations; travel bans and quarantines; restaurants closed; all indoor events restricted; over forty countries state of emergency declared; massive slowing of the supply chain; stock market volatility; falling business confidence, growing panic among the population, and uncertainty about future.

This report also analyses the impact of Coronavirus COVID-19 on the Methylamine 3900 industry.

Based on our recent survey, we have several different scenarios about the Methylamine 3900 YoY growth rate for 2020. The probable scenario is expected to grow by a xx% in 2020 and the revenue will be xx in 2020 from US\$ xx million in 2019. The market size of Methylamine 3900 will reach xx in 2026, with a CAGR of xx% from 2020 to 2026.
