Abstracts

This report studies the global Methylcyclohexane market status and forecast, categorizes the global Methylcyclohexane market size (value & volume) by manufacturers, type, application, and region. This report focuses on the top manufacturers in North America, Europe, Japan, China, India, Southeast Asia and other regions (Central & South America, and Middle East & Africa).

Methylcyclohexane is an organic compound with the molecular formula is $\text{CH}_3\text{C}_6\text{H}_{11}$. Classified as saturated hydrocarbon, it is a colourless liquid with a faint odor. Methylcyclohexane is used in a rubber, coating, organic synthesis, chromatographic analysis, etc.

The key raw material is methylbenzene and thus the fluctuation of the methylbenzene market would lead to the change of the methylcyclohexane price. The process is relatively easy, methylbenzene reacts with H_2 to make methylcyclohexane, then through washing, drying and distilling to get more pure product.

The demand of the methylcyclohexane is relatively small, the main application is in the rubber, coating, organic synthesis, chromatographic analysis and others. Because there are some substitutions which can total replace it and the profit is not high, the production in the world is limited and even some companies begin to stop producing it. In the world the production is mainly concentrated in Asia, especially in China and South Korea. In 2016 China and South Korea take 46.61% and 34.35% of the global production, compared to 4.29% and 11.53% in USA and Europe. At the same time, China and South Korea are also the main consumption countries in the world, the total share of China and South Korea reaches to about 60%. This can indicate that export is small and most products are consumed in manufacturing countries themselves.

The global Methylcyclohexane market is valued at 75 million US\$ in 2017 and will reach 84 million US\$ by the end of 2025, growing at a CAGR of 1.5% during 2018-2025.
