## Abstracts

This report studies the global Mica Capacitors market status and forecast, categorizes the global Mica Capacitors market size (value & volume) by key players, type, application, and region.

This report focuses on the top players in North America, Europe, China, Japan, Southeast Asia India and Other regions (Middle East & Africa, Central & South America).

The term “Mica” is a collection of natural minerals. Silver mica capacitor is a capacitor that uses the name mica as the dielectric. These capacitors are classified into two types, namely silver mica capacitor and damped mica capacitor. Silver mica capacitors are used in its place of clamped mica due to their lower characteristics. Generally, mica capacitors are low loss capacitors which are used where the high frequency is required and their value doesn't change much over time. These capacitors are constant chemically, mechanically and electrically due to its particular crystalline structure (typical layered structure). This creates it achievable to produce thin sheets in the order of 0.025-0.125 mm. The most frequently used micas are Phlogopite mica and Muscovite mica. The high difference in raw material work leads to high cost required for check & sorting. Mica doesn't respond with most acids, oil, water and solvents.

Global mica capacitors market is anticipated to grow at a higher CAGR in the forecast period owing to growth in commercial uses of capacitors. Mica capacitors industry is driven by factors such as need for high precision, stability and reliable capacitor in circuits. Additionally, the need for sophisticated chip set for computer and TV motherboards is expected to propel the market growth in the forecast period. Europe and North American market is expected to rise at a higher CAGR owing to proliferated use of mica capacitors for chipsets.

The global Mica Capacitors market is valued at xx million US\$ in 2017 and will reach xx million US\$ by the end of 2025, growing at a CAGR of xx% during 2018-2025.
